

Fork Positioner for Forklift

Fork Positioner for Forklifts - A fork positioner is actually a device constructed out of high quality materials intended to be able to withstand the most demanding procedures and work environments. This piece of equipment enables the person driving to be able to operate the forks hydraulically without leaving the seat. Side shifting models have the extra ability to be able to laterally position the entire load or the arms in order to facilitate more precise carrying and placement in a faster and more efficient way.

The only one of its kind blade pocket design can enable the person operating it to be able to securely swing the unit's forks without any worry of destroying the positioning cylinders. This could allow the operator the choice to either perform independent or simultaneous fork movement, depending on the job requirement. For most forklifts with non-OEM carriages, complete carriages are considered necessary. Standard OEM carriages can be converted into fork positioners on existing units.
