The U.S. lift Truck division located in Cleveland has a skilled team experienced in Sales, Purchasing, Marketing, Logistical and Technical Support.

Korea's original home-based lift truck market was an open-import enterprise. In the 1960's, Korea Machinery Co. Ltd. began to import assembled lift trucks as part of a nationwide machinery expansion project. Early sales of this manufacturing equipment focused on large business communities, the armed forces and on state-run companies. This eventually led to a merger with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division commenced trade operations throughout Korea to overhaul and sell this heavy equipment. By 1978, a forklift production plant was successfully completed. Continuous technical training became the new focus for enhancing quality and product development.

Home-based forklift business for Daewoo started in 1967 and grew to an astounding 90% market share in Korea. By the 1980's, Daewoo's advanced technological enhancements combined with sales success placed them in a situation of significant expansion of their forklift business.

In 1981, Caterpillar Industrial Inc. of the United States, proposed a cooperative venture project to respond to competitive pressures in the US materials handling industry. This plan drastically expanded Daewoo's lift truck sales. Construction was finished in 1984 to facilitate a contemporary plant which helped set up the business for the fabrication of high added-value goods suitable for export. In 1993, the company had a global sales network and started exporting models they had developed through in-house technology, as an independent product. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing growth opportunities into overseas marketplaces.
